

$$D = 101110$$

G= 100 I

R = ?

What does **G** reveal about **R**?

As **G** is 4 bits long, **R** will be 3 bits long?

Exercise: Given the generator polynomial $G=1101$
or $x^3 + x^2 + 1$ and the data polynomial $D=$
 100100 , calculate the remainder R .
